DETAILED ACTION

Conclusion

1. This application is in condition for allowance except for the following formal matters:

Drawings

2. The drawings are objected to because reference character **32b** in **Figure 5** is not pointing to the vertically extending hole. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled “Replacement Sheet” in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

3. The disclosure is objected to because of the following informalities:

“support member 32b” [0035] needs to be changed to --support member 32a--.

Appropriate correction is required.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213. A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter

Allowable Subject Matter

4. Claims 1-20 are allowed.
5. The following is a statement of reasons for the indication of allowable subject matter:

The recitations of the specific features of the windscreen attaching/detaching device in claims 1 and 15 including especially the construction of the windscreen engages the damper member with the stopper as well as engages the arm with the hook to turn the lever to the locked position that allows the windscreen to be secured to the vehicle body is not taught nor is fairly suggested by the prior art of record.

The recitations of the specific features of the method for attaching/detaching a windscreen to a vehicle body in claim 16 including especially the construction of the engaging a stopper with a damper member, engaging an arm with a hook to turn a lever to a locked position, wherein the damper member and the stopper are securely engaged with each other using a tensile force produced by the arm and the lever is not taught nor is fairly suggested by the prior art of record.
